

Summit Bechtel Course Guide

Tag points of interest and auto-narrate them for passengers as you drive the course.

1 Two modes

Toggle at the top of the screen:

- **Plan** — build and edit the course (add/move/label points).
- **Drive** — big passenger display; points pop up automatically as you approach them.

2 Add a point (Plan mode)

- Tap **+** **Add point**, then tap the map where the site is — or drop it at your current GPS location.
- Fill in a **name**, a short **description** (shown big to passengers), and private **notes** for the driver.
- Pick a **category** and a trigger **radius** (how close you must be for it to pop up).
- Drag any pin to fine-tune its spot.

3 Drive the course

- Switch to **Drive** and mount the iPad so passengers can see it.
- As you enter a point's radius, its card appears with the description and a **coming up** list.
- The screen stays awake; an optional chime sounds on arrival.

4 Works offline

- Tap **Download this area for offline** while you still have signal — caches map tiles around your points.
- The course itself is saved on the device, so Drive mode runs with no cell service.

5 Install on the iPad

- Open the site in **Safari**.
- Tap **Share** → **Add to Home Screen**.
- Launch it from the icon like a normal app (full screen, no browser bars).

6 Map view & sharing

- Switch between **Topo** (default) and **Satellite** in the Plan panel; pinch to zoom in close.
- The course is **shared live** — everyone on the same link sees each other's edits within seconds.
- Use **Export / Import** to back up or hand off a course as a file.

Tip: GPS needs an outdoor sky view and location permission enabled. If points don't pop up, check that Location is allowed for the site and you're inside the trigger radius.
