

Summit Bechtel Course Guide

Tag points of interest and auto-narrate them for passengers as you drive the course — plus plan a route with drive-time estimates. dfreriks-snow.github.io/bechtel-course-guide

1 Three modes (top-left toggle)

- **Drive** — the default. Big passenger display; the map follows your GPS and each tagged site pops up automatically as you approach. Safe to share — no editing.
- **Walk** — for scouts & staff on foot. Closer zoom for a 2 mph pace; same auto-pop cards. Walking routes follow **trails and car-free roads** (incl. lanes closed to vehicles around the Summit Center), not the driving roads.
- **Plan** — build/edit the course. It is **password-protected**. Tap **Plan** (lock icon) and enter the password (from your tour lead), and it unlocks on that device. A lock button re-locks it when you hand off the device.

2 Add a point (Plan mode)

- Tap the map where the site is, or use **Drop point at my location**.
- Fill in a name, category, short description, talking-point notes, and a trigger radius (how close before the card pops).
- **Hit Save to keep it.** If you close the editor without saving (tap off it, or the close button), the pin is discarded — it won't be added.
- Drag any pin to reposition it, or type its exact **GPS coordinates** (latitude / longitude) in the point editor.

3 Drive the tour (Drive mode)

- Mount the iPad facing the passengers. As you come within a site's radius, a large card shows its description + notes, with a 'coming up' list of the nearest points. If you're within range of several at once, each gets its own card, stacked (none are hidden).
- Optional arrival chime; the screen is kept awake automatically.
- **Find or preview a point:** tap the search (magnifying-glass icon) to jump to any point by name; tap a point on the map to pop its info card (closes after 10s, on re-tap, or X).
- **Map style:** the layer dropdown (top-right) defaults to **Streets** — switch to **Topo** or **Satellite** anytime.
- **Map markers:** a **red X** marks a no-drive / blocked area — don't drive through it (your course already routes around it). A **green X** is a park-and-walk spot: park there and continue on foot.

4 Guide — plan a course & drive time

- Tap **Guide** (compass icon, top-right), then add stops by **tapping points on the map** or the **Add a stop** dropdown — each gets a numbered gold badge showing the order.
- Reorder stops with ▲▼, remove one with X, and optionally loop back to the start.
- **Travel by Drive or Walk** (toggle at the top of the planner): Walk estimates at 2 mph following trails and car-free roads; Drive uses the road speeds below.
- See the **total tour time** (travel + your stop times), **total miles**, and a per-leg breakdown (15 mph reserve, 20 mph approach, 5 mph activity zones — flagged).
- The course draws as a gold line on the map; toggle **Show road network overlay** in the Settings menu (gear icon).

5 Work offline (patchy cell coverage)

- Open the link in **Safari** → **Share** → **Add to Home Screen** → launch from the icon for a fullscreen app.
- While you still have signal, open **Settings** (gear icon) → **Download this area for offline** to cache the map tiles. Add your points first.
- Allow **Location** when prompted (choose 'While Using').

6 Share & back up

- Share the app link for Drive mode — recipients get the tour but can't edit (Plan is locked).

- **Settings** → **Export / Import course** saves or loads the whole course as a file. These require **Plan to be unlocked** (the admin password), so a shared device can't export or overwrite the course.
