

Summit Bechtel Course Guide

Everything a tour guide needs to get rolling. dfreriks-snow.github.io/bechtel-course-guide

1 Open & install

- On the iPad, open dfreriks-snow.github.io/bechtel-course-guide in **Safari**.
- **Share** → **Add to Home Screen**, then launch it from the icon (fullscreen).
- Tap **Allow** for Location (choose 'While Using').

2 Drive (or walk) the tour

- The app opens in **Drive** mode — mount the iPad facing your passengers.
- As you approach each tagged site, its card **pops up automatically**. Just talk to it.
- On foot? Tap **Walk** (top-left) — closer zoom for a 2 mph pace; routes follow trails/car-free roads.

3 Plan your route + drive time

- Tap **Guide** (compass icon), then add stops by **tapping the points on the map** or using the dropdown → reorder with ▲▼ → read the **total time & miles**.
- Toggle **Drive or Walk** at the top: Drive assumes 20 mph on roads / 5 mph in activity zones; **Walk** estimates 2 mph along trails and car-free roads.

4 Before you lose signal

- Open **Settings** (gear icon) → **Download this area for offline** so the map works with no service.

5 Editing points (leaders)

- Tap **Plan** (lock icon) → enter the Plan password (from your tour lead) to add/move/edit points.
- Drop a pin, fill it in, and **hit Save** — closing without saving discards it. Tap the lock button to re-lock.
- Export / Import (in Settings) also unlock with the same password.

Tip: the shared link is safe to hand out — anyone can drive the tour, but only people with the password can change the course.
